

**To the Zucchetti Centro Sistemi and Husqvarna robotic lawnmower dealer regarding the signal interferences between products**

Dear \_\_\_\_\_

We are aware of problems occurring between Zucchetti robotic lawn mowers and the Husqvarna Automower concerning the signal interferences. This problem may occur if the two different robotic mowers are installed adjacent to each other, resulting in that the Automower may stop with a fault message.

This is due to a strong sinusoidal perimeter wire signal emitted by the Zucchetti lawn mowers. Since neither Zucchetti Centro Sistemi nor Husqvarna mean to damage each other, Zucchetti Centro Sistemi is going to rectify its signal to avoid further interferences problems.

This has been corrected for next season's mowers. Consequently, should some interference issues occur on the existing installations, we expect that the Zucchetti dealers act promptly in order to correct the problem by means of a modification, which consists on the addition of a resistor connected in series with the Zucchetti perimeter wire.

Zucchetti upon request will provide the necessary hardware to modify the lawn mower robot in order to achieve compatibility between the Husqvarna Automower and the Zucchetti brands.

All importers and resellers are kindly invited to behave in a professional way so that the robotic business can get benefits from this issue.
